

Adding Clips to Your Project in the Project Library

From the Event Library, select the Event that you wish to use for your movie. Your clips will appear in the Event Browser to the left of the Event Library.

Different Clips

Each of your clips appear as frames similar to the old fashion films. A clip begins with a smooth edge and ends with a smooth edge. Zigzag edges indicate the clip is continued in the line below or above.

Extend a Clip Selection

Click any of the clips that appear. A yellow box will indicate your selection with handles on the left and right. To extend the selection you can place the cursor over a handle, then click and drag to extend outward from the center of the yellow box.

Skimming

You can manually skim over the clip by dragging the cursor over the clip.

Start and Stop viewing a clip

To view your selection, place the cursor on the clip and press the space bar once to start. Press it a second time to stop the viewing.

Place Clip in Project

Once you have a clip selected in the yellow box, click inside the yellow box to grab it, hold and drag it to the Project Library.

Note: Clips that are used in your project are underlined in orange in the Event Browser window.

Add More Clips

You can add more clips by repeating the selection process and dragging them to the Project Library.

Change the Order of Your Clips

Once clips are in the Project Library you can change their order by dragging them into a new location. Look for the **green bar** to see where it will be placed.

Deleting Clips in the Project Library

If you change your mind and wish to remove a clip, simply select it, then press DELETE.

Delete a Project

In the Project Library, select a project. Under File in the menu bar, select Move Project to Trash.
